The Structure of Inequality

Inequality of labor income
In the book by the famous economist, it is argued that the main reason for income inequality is the right-skewed distribution of earnings. This means that the majority of the population earns a low income, while a small percentage earns significantly more. The book provides evidence to support this claim, using data from various countries and time periods. It also discusses the implications of income inequality on social mobility and political stability.

However, critics of this view argue that income inequality is not just a result of market forces, but also a result of government policies. They point out that countries with high levels of income inequality have also implemented policies that favor the wealthy, such as tax cuts for the rich and deregulation of industries. In conclusion, the book provides a comprehensive analysis of income inequality, but further research is needed to fully understand its causes and potential solutions.
